CompliVibe
BUSINESS MODEL

How CompliVibe makes money — recurring, expansion-led, and priced by AI risk.
$500 to get audit-ready. $1,000 to cover every framework. Enterprise when trust is mission-critical.

Confidential — For leadership & investor conversations · Version 1.0

01 THE MODEL

Recurring SaaS at the core, priced globally by AI risk, and grown through expansion — because compliance is never one-time.

CompliVibe sells a subscription to an AI Trust platform. Customers pay to know, prove, and maintain that their AI is compliant and trustworthy. The model is built to compound: every new AI system, every added framework, and every new regulation is a reason for a customer to pay more — with almost no new cost to serve.

Three things make the model strong

– **Recurring —** recurring and sticky — compliance is ongoing, so revenue renews and grows, not resets.
– **Expansion built in —** expansion is near-pure margin — more AI systems and frameworks raise revenue with little new cost.
– **Global & value-based —** priced in USD, globally — never per-seat, so adoption is never punished.

02 REVENUE STREAMS

A recurring core, layered with high-margin lines that grow with the customer.

– **1 · Core subscription —** tiered subscription (Starter, Growth, Enterprise) — the recurring base.
– **2 · Audit-readiness sprints —** a premium fee for deadline-driven readiness (e.g. an EU AI Act phase-in).
– **3 · Policy & artifact generation —** charge for generated model cards, risk assessments, and policies — usage-based.
– **4 · Trust Score / Verified badge —** a recurring, high-margin verification line that also markets us for free.
– **5 · Usage overage —** metered charges for AI systems and frameworks beyond the tier cap.
– **6 · Benchmark data (later) —** anonymised industry benchmarks sold as the dataset matures.

03 PRICING

Monthly headline, billed annually. Tiers gate on value — AI systems and frameworks — never on seats.

	Starter	Growth	Enterprise
Price (monthly)	$500 / mo	$1,000 / mo	From ~$3–5K / mo
Billed annually	$6,000 / yr	$12,000 / yr	$40K–120K+ / yr
Best for	Seed–Series A, AI-native	Series A–B (sweet spot)	Regulated / multi-framework
Frameworks	1–2	All frameworks	All + custom
AI systems governed	up to ~5	up to ~25	Unlimited
Trust Score + audit report	Included	Included	Included
Peer benchmarking	—	Included	Included
Verified badge	—	Included	Included
Support	Self-serve + email	Priority	Dedicated CSM · SLA · DPA · SSO

Annual billing shown with ~2 months free vs. monthly. Enterprise is custom and floors at ~$40K/yr.

Add-ons (on top of subscription)

- **Audit-readiness sprint —** $2K–10K one-time, deadline-driven.
- **Policy & artifact generation —** usage-based, per generated artifact.
- **Overage —** metered, per AI system or framework beyond the cap.

04 PACKAGING & FENCES

The gap between tiers is designed to make the upgrade obvious.

- **The value metric is AI systems + frameworks, not seats —** charging per user punishes adoption. AI systems and frameworks scale with the value delivered.
- **The fence between $500 and $1,000 is 'all frameworks + benchmarking' —** this is the single most compelling reason to move up. Competitors charge $5K+ per extra framework; we bundle them all at $1,000/mo.
- **Caps create the upgrade path —** the AI-systems cap (5 → 25 → unlimited) creates a natural, usage-driven upgrade path as a customer grows.
- **Enterprise is about assurance, not volume —** Enterprise adds what large and regulated buyers require — dedicated CSM, SLA, DPA, SSO — not just more usage.

> **PRINCIPLE** Lead every quote with “one price, every AI framework.” It is the cleanest, most differentiated hook we have.

05 UNIT ECONOMICS

Defensible even conservatively. Two states: early (unproven cohorts) and scaled (target).

Metric	Conservative (early)	Target (scaled)
Blended ACV	$9,000	$20,000
Gross margin	70%	82%
Annual logo churn	18%	10%
CAC (performance-based)	$4,500	$6,000
LTV	~$35,000	~$90,000+
LTV : CAC	~7.8 : 1	~13–15 : 1
CAC payback	~9 months	~4.5 months

Illustrative — calibrate to actuals as cohorts mature. Healthy SaaS benchmarks are 3:1 LTV:CAC and <12-month payback; both states clear them.

Why the numbers hold

- **Performance-based CAC —** the partner royalty hits year-one only, not renewals, keeping LTV clean.
- **Gross-margin swing —** automating the regulatory-update engine is the single lever from 70% to 85% margin.
- **Expansion is near-pure margin —** adding a framework or AI system raises ACV with near-zero new CAC.
- **NRR tailwind —** every new AI law is an automatic upsell; 110–120% NRR pushes real LTV well above the table.

Honest caveats (state before asked)

- **—** projections built on early customers, not proven cohorts.
- **—** enterprise cycles are long and lumpy; enterprise CAC may run higher.
- **—** gross margin is unproven until the update engine is automated.

06 LAND & EXPAND

The model is designed for customers to enter cheaply and grow inside the platform.

- **Land —** a startup enters at $500/mo to get audit-ready for one framework — low friction, fast value.
- **Expand —** they add frameworks and AI systems, moving to $1,000/mo; a new regulation or an EU deal triggers the jump.
- **Graduate —** as they scale and face enterprise buyers, they need SLAs, DPAs, and SSO — and move to Enterprise.

The same account can travel from $6K to $12K to $50K+ per year without a new acquisition cost. This is where net revenue retention above 100% comes from — and why the model compounds.

> **PRINCIPLE** Optimise for time-to-first-value at the entry tier. The faster a customer sees their Trust Score, the sooner the expansion path begins.

07 PRICING GUARDRAILS

A few rules that protect the model as we scale.

- **Never go below the floor —** sub-$5K/yr signals 'tool, not infrastructure.' $500/mo is the floor that still says serious.
- **Protect the enterprise floor —** never let a custom deal fall below ~$40K/yr, or the category erodes.
- **Annual first —** bill annually, show monthly — it improves cash and retention, and reads cheaper.
- **Value, not cost-plus —** price on value delivered, not effort or seats.

THE ONE LINE

$500 to get audit-ready, $1,000 to cover every framework, enterprise when trust becomes mission-critical — recurring at the core, compounding with every AI system and every new law.
