

○ COMPLIVIBE

The *Trust Layer* for AI

Govern, comply, and monitor — in real time. We help AI companies prove their systems are ready for regulated buyers.

THE TEAM

Technical enough to build the moat. *Operator enough to sell it.*

A founding team pairing AI-native engineering with real enterprise compliance execution.

Adarsh Sharma
Founder & CEO

IIT Patna · ex-Google · ex-IBM

Builds the AI-native platform and the patented IP behind it.

Saransh Jha
Co-founder & COO

Allahabad University (Master's) · ex-Genpact · ex-Concentrix

10+ years running enterprise operations and compliance execution.

A rare pairing: the technical ability to build AI-native trust infrastructure — and the compliance operating experience to sell it into enterprises.

AI ships in days. *Trust takes months.*

AI teams move fast — new models, prompts, and agents every week. But governance, compliance, and monitoring still run on spreadsheets and periodic manual reviews. The gap between how fast AI moves and how slowly trust is proven is where deals stall and risk hides.

-
- 01 **Static checks can't watch dynamic AI.** Models drift, prompts change, vendors shift — a point-in-time audit is stale the day it's signed.
 - 02 **The proof is scattered.** Evidence lives across ten disconnected tools. No single source of truth means no fast answer when a buyer or regulator asks.
 - 03 **No proof, no deal.** Enterprise buyers now run 30–60 day AI security reviews before they'll sign. Enterprises won't buy AI they can't verify — slow trust means slow revenue.
-

AI teams don't need another tool. They need a real-time trust layer built for how AI actually ships.

THE SOLUTION

The *system of record* for AI trust.

CompliVibe connects governance, compliance, and monitoring into one live trust layer across your AI systems. Every model, control, and piece of evidence lives in one place — so proving your AI is trustworthy takes minutes, not months.

Once your evidence, controls, and proof live in CompliVibe — it becomes the system you can't rip out.

A market being forced into existence — *right now.*

Every company shipping AI now needs to govern it, prove it's compliant, and monitor it continuously. Regulation is turning that from optional to mandatory.

\$40–50B

TAM — THE CATEGORY

Global GRC, AI governance, and compliance-monitoring spend by 2030 — 40–45% CAGR as AI regulation matures.

\$1–2B → \$4–
6B

SAM — WHO WE SERVE

AI-first SaaS and regulated enterprises that must prove AI trust to sell — today growing to 2030.

₹5–8Cr

SOM — THE BEACHHEAD (3-YR)

ARR base case; ₹20Cr+ upside — land with AI-first companies preparing for enterprise and EU expansion.

EU AI Act enforcement phases in through 2026–27. India's DPDP rules are landing. Colorado, ISO 42001, NIST — the compliance clock is ticking for every AI company. This market isn't a bet on adoption; it's a regulatory deadline.

THE PRODUCT

Governs what your AI does — *before it does it.*

One platform across the full AI trust lifecycle — discover, govern, comply, and prove, in real time.

Discovers Shadow AI automatically

Finds the ungoverned AI tools and data flows your compliance program can't see — no agents, no guesswork.

Governs AI at runtime

Classifies each system under EU AI Act, enforces policy before execution, monitors for drift and bias.

Proves it continuously

Live posture score, signed evidence, audit-ready in days not months.

TRACTION

Early, but the *demand signal is real.*

50 leads pulled through to a paying customer — fast. That conversion speed is the story.

1 paying customer + 7 pilots (3 closing) — 13 days from launch

First revenue: Vessora at · ACV ~₹96K

Early AI-first companies are adopting CompliVibe to get enterprise-ready and regulation-ready — before they're forced to.

Land with AI governance. *Expand into the full compliance stack.*

Enter where we're differentiated and demand is urgent — then become the system of record customers can't rip out.

Once your evidence, controls, and audit history live in CompliVibe, replacing it means re-proving years of compliance. That's the moat.

Built AI-native — *for what legacy GRC can't do.*

Compliance automation and GRC tools weren't built to govern AI. We were.

WHERE THEY STOP

vs. Compliance automation — Vanta, Drata, Sprinto

Great for SOC 2 / ISO workflows. Not built for AI governance, Shadow AI discovery, or runtime policy enforcement.

vs. Enterprise GRC — OneTrust, MetricStream

Broad policy coverage, but heavy, expensive, and not AI-native for fast-moving AI teams.

vs. AI governance point tools — Credo, Holistic

Focused on model risk — disconnected from compliance execution, evidence, and the audit system of record.

THE MOAT

Patented IP

7 patents filed (3 formal, 4 provisional) — Shadow AI discovery, agentic runtime policy enforcement, cryptographic consent propagation.

System of Record

Evidence vault, audit history, and cross-framework mappings compound — the longer a customer stays, the harder to leave.

AI-Native Architecture

Built for how AI ships — continuous, runtime — not retrofitted onto point-in-time audit tools.

Land-and-Expand Surface

Enter on AI governance, expand across the full compliance stack — widening switching cost over time.

Others solve point problems. CompliVibe becomes the system of record for AI trust.

SaaS pricing, AI-native margins, clear path to ₹10L+ MRR.

Starter	₹9,999/mo
Growth	₹24,999/mo
Pro	₹74,999/mo
Enterprise	₹1.5–5L/mo

60–70% cheaper than incumbent GRC alternatives — because AI handles the repetitive work.

Total: 77 customers → ₹11.24L MRR

○ COMPLIVIBE

CompliVibe is *the trust layer for AI.*

Govern, comply, and monitor — in real time.
