

THE TWO-YEAR PLAN

OWNING THE AI TRUST CATEGORY

CompliVibe — Strategic Plan for C-Level Leadership

A 24-month plan to move from a strong product to a category-defining company — phased, measurable, and illustrated with concrete examples throughout.

Audience: CEO, COO, CFO, CMO, CPO
Confidential — Internal circulation only

00 THE STRATEGIC THESIS

AI is becoming foundational to every company. The bottleneck to deploying it is no longer capability — it is trust. Regulators, enterprise buyers, boards and insurers all need proof that an AI system is safe, compliant and accountable. Today there is no default way to prove it. That gap is a category waiting to be named.

The two-year objective is not “more customers.” It is to define and own that category — AI Trust — before incumbents retrofit into it and before newcomers get there first. Everything in this plan bends toward one end state: when a company asks “how do we prove our AI is trustworthy?”, the answer is CompliVibe.

DIRECTION Treat category ownership as the primary objective and customer count as the evidence of it — not the other way around.

01 WHAT WINNING LOOKS LIKE (MONTH 24)

A single, concrete picture the whole leadership team can aim at.

By month 24, CompliVibe is the recognised name in AI Trust. Paying customers run across five regions on one platform. The Trust Score is a signal buyers ask for by name and write into RFPs. The benchmark dataset is large enough that no competitor can match its peer comparisons. A partner ecosystem drives a quarter of new pipeline. Our own regulatory-update engine is automated, holding gross margin at target. We are audited on the very standard we sell.

EXAMPLE *An enterprise procurement team, evaluating three AI vendors, asks each: “What’s your CompliVibe Trust Score?” — the way they ask for a SOC 2 report today. That single sentence is what winning sounds like.*

02 OPERATING PRINCIPLES

Five rules for every decision over the next 24 months. When trade-offs appear, these break the tie.

- **Category over features** — win the narrative and the standard, not the feature checklist. Features get copied; categories get owned.

EXAMPLE *Instead of racing to match a competitor’s new dashboard, publish the industry’s reference “AI Trust Index” — defining the yardstick others are measured by.*

- **Global from day one** — every decision assumes a worldwide market. Never build or price for one country.

EXAMPLE *Framework coverage and pricing are designed so a Berlin fintech and a Dubai health startup onboard as easily as an Indian SaaS — no rework.*

- **Compounding over linear** — prefer moves that get stronger with scale — data, the badge, the ecosystem — over ones that stay linear.
- **Trust by example** — we hold ourselves to the standard we sell. Our own security and governance are sales collateral.
- **Ruthless focus** — one wedge at a time. Phase gates exist to kill distraction, not to add scope.

03 THE FIVE STRATEGIC PILLARS

The plan stands on five pillars. Each is defined, illustrated, and given a clear marker of success.

Pillar 1 — Category Leadership

Become the name that defines AI Trust: set the vocabulary, publish the standard, own the narrative that analysts and press repeat.

EXAMPLE *Publish an annual “State of AI Trust” report and a public “AI Trust Index,” so that when a journalist writes about AI governance, they cite CompliVibe — the way Vanta owns the SOC 2 conversation.*

- Success: an industry analyst names the AI Trust category and lists CompliVibe as the reference vendor.

Pillar 2 — Trust Score as Industry Currency

Turn the Trust Score into an external signal buyers, auditors and boards recognise and act on — like a credit score for AI.

EXAMPLE *A startup puts “CompliVibe Trust Score: 87” on its sales deck to win an enterprise deal, and the enterprise starts asking all its vendors for the same number.*

- Success: buyers request the score unprompted; it appears in real RFPs.

Pillar 3 — Global Footprint

Paying customers and full framework coverage across US, EU, India, Middle East and APAC — borderless in practice, not just in positioning.

EXAMPLE *A Bangalore AI SaaS, a Berlin fintech and a Dubai health startup each run their own frameworks — DPDP, EU AI Act, local health rules — from one CompliVibe platform.*

- Success: more than 40% of revenue comes from outside the home market; all major frameworks are live.

Pillar 4 — The Data Moat

Assess enough companies that the benchmark dataset becomes uncopyable. More customers make it smarter, which wins more customers — a loop no competitor can shortcut.

EXAMPLE *CompliVibe can tell a Series A HealthTech “you’re in the bottom 30% of your peer group on AI risk” — a claim no rival can make, because no one else holds the data.*

- Success: peer benchmarking is live and cited by customers as a reason they bought.

Pillar 5 — Ecosystem

Auditors, integrations and platforms build on CompliVibe, making “infrastructure” literally true — others plug into us.

EXAMPLE *An audit firm adopts CompliVibe evidence packages as its standard intake, and a cloud marketplace lists CompliVibe so partners can resell it.*

- Success: more than 25% of new pipeline is sourced through partners and the ecosystem.

04 THE PHASED ROADMAP

Four phases of six months. Each has one theme, a focus, the key moves, and a single exit milestone that gates the next phase.

PHASE 1 · Months 1–6 FOUNDATION & WEDGE

Focus: *nail one wedge, prove enterprise-grade, ship the score.*

- Lock a single wedge ICP — e.g. AI-native SaaS, Series A–B, selling into the EU — and say no to everything else.
- Certify our own security (SOC 2 / ISO 27001) so we are audit-proof and can sell trust credibly.
- Ship Trust Score v1 and the Audit-Ready Evidence Report — the deal-closing deliverable.
- Land the first reference customers and turn two into named case studies.

Exit milestone → two named case studies, own security certified, first value delivered in under seven days.

PHASE 2 · Months 7–12 PROOF & REPEATABILITY

Focus: *turn wins into a repeatable machine and prove the economics.*

- Build a repeatable GTM engine — partner-led plus outbound — with a defined, tracked CAC.
- Automate 3–4 frameworks end to end so onboarding scales.
- Launch a free “Trust Score” scan on the site — lead-gen and dataset seeding in one move.
- Book first expansion revenue by upselling an added framework to an existing customer.

Exit milestone → repeatable pipeline, NRR signal above 100%, and gross margin visibly rising through automation.

PHASE 3 · Months 13–18 SCALE & STANDARD

Focus: *scale regions, establish the score as a signal, harden the moat.*

- Go live with customers in multiple regions and localise frameworks.
- Publish the first “State of AI Trust” report and the “AI Trust Index” — the category move.
- Release peer benchmarking to general availability — the data moat made visible.
- Launch the public “CompliVibe Verified” badge so customers market us for free.

Exit milestone → buyers requesting the score, peer benchmark cited in deals, over 40% of revenue outside the home market.

PHASE 4 · Months 19–24 CATEGORY & MOAT

Focus: *own the category and let the ecosystem compound.*

- Engage industry analysts to anchor “AI Trust” as a named category with us as reference vendor.
- Stand up a partner/ecosystem program driving a quarter of pipeline.
- Scale policy and artifact generation as a distinct revenue line.
- Complete automation of the regulatory-update engine, holding gross margin at target.

Exit milestone → recognised category leader, ecosystem-driven pipeline, and target unit economics proven.

05 THE SCORECARD

The few numbers that tell us the plan is working. Targets are illustrative directions — calibrate to actuals as cohorts mature.

Metric	P1	P2	P3	P4
Paying customers	~10	~30	~75	~150
Regions live	1	2	4	5
Frameworks automated	2	4	6	6+
Net revenue retention	—	100%	110%	115%+
Gross margin	70%	74%	80%	82%+
Partner-sourced pipeline	—	10%	20%	25%+
Trust Score in RFPs	—	first	growing	standard

P1–P4 = the four six-month phases. The rightmost column is the month-24 target.

DIRECTION Review the scorecard at every phase gate. A phase is not “done” on time — it is done on its exit milestone. Do not advance on the calendar alone.

06 RISKS & MITIGATIONS

The five that can derail the plan, and how each is neutralised.

- **Incumbents add AI governance** — mitigate by moving faster on category and data. Being AI-native in depth is hard to retrofit; the dataset can’t be bought.
- **Long enterprise sales cycles** — mitigate by landing Growth-tier deals first and using audit deadlines (EU AI Act) to create urgency.
- **Regulatory uncertainty** — mitigate with the 48h update engine — every rule change becomes an upsell, not a threat.
- **Data / consent error** — mitigate with strict anonymisation and ToS consent. For a trust company this misstep is fatal — be the model.
- **Focus dilution** — mitigate with one wedge at a time and hard phase gates. Scope creep is the default failure mode of good teams.

07 WHAT IT TAKES

The plan is fundable and executable on three inputs.

- **Capital** — enough runway to reach the Phase 2 proof point — repeatable pipeline and rising margin. This is what the raise buys.
- **Team** — engineering for the update engine and automation, customer success for retention, and a lean GTM motion.
- **The one bet** — automate the regulatory-update engine. It is the single highest-leverage action — it unlocks both margin and scale.

EXAMPLE *If only one initiative gets funded next quarter, it is engine automation — because it moves gross margin from 70% toward 85% and removes the human bottleneck on every new customer and every new law.*

THE ONE LINE

**In two years we will not have a better compliance tool. We will have a category —
AI Trust — and CompliVibe will be its name, its standard, and its default answer.**
