How to use this FAQ

Use this document beside the investment memo, deck, product demo, traction folder, cap table, financial model, and legal documents. Every answer is written to be investor-safe: clear, direct, and proof-backed without overclaiming.

FAQ map

#	Section	Coverage
01	Company and category	6 questions
02	Product and technology	10 questions
03	Traction and customer proof	6 questions
04	Market, GTM, and business model	6 questions
05	Competition and moat	5 questions
06	Financing, cap table, and runway	7 questions
07	Risk, legal, and security	6 questions

Important investor discipline

If a claim is not supported by a primary document, label it as planned, modeled, founder-reported, beta, staged, or roadmap. This keeps the data room credible and reduces investor pushback.

01

Company and category

Question investors may ask	Investor-ready answer	Proof / data-room file to support
What is CompliVibe?	CompliVibe is AI-native trust infrastructure for companies that need to govern, monitor, evidence, and prove AI readiness before enterprise and regulated-market sales.	One-pager, investment document, product demo.
Is CompliVibe only a compliance tool?	No. Compliance is the wedge. The broader platform is AI governance, evidence, risk, monitoring, reports, human review, and trust infrastructure.	One-pager, product screenshots, roadmap.
What problem are you solving?	AI companies need credible proof that their AI systems are documented, monitored, reviewed, and supported by evidence. Today that process is usually manual, scattered, expensive, and slow.	Problem slide, customer notes, procurement emails.
Who is the first customer segment?	AI-first SaaS companies, ML platforms, fintech/healthtech AI teams, and enterprise AI vendors preparing for regulated or trust-sensitive sales.	One-pager target-customer section, CRM export.
What is the wedge?	EU AI Act and India DPDP readiness for AI-first companies that need documentation, evidence, controls, audit trails, and buyer-ready trust outputs.	Regulatory pack screenshots, sample reports.
What is the long-term vision?	To become the trust, governance, and observability infrastructure layer for every company operating AI at scale.	One-pager vision section, roadmap.

02

Product and technology

Question investors may ask	Investor-ready answer	Proof / data-room file to support
What is live today?	The live wedge includes AI system inventory, evidence vault, EU AI Act and India DPDP readiness workflows, reporting, mappings, and review-oriented workflows. Expansion packs must be labeled clearly as roadmap or hardening.	Product QA, demo access, screenshots, release notes.
Which frameworks are covered?	EU AI Act and India DPDP are the active wedge. ISO 42001, NIST AI RMF, SOC 2/ISO 27001, and U.S./Colorado ADMT readiness are expansion packs.	Framework map, source notes, roadmap.
Are framework mappings static or automated?	They should be described precisely. Some mappings are structured readiness content and workflow logic; connected evidence automation should only be claimed where live integrations actually pull evidence.	Framework matrix, integration logs, evidence samples.
What is the Evidence Vault?	The Evidence Vault stores evidence objects and	Evidence Vault screenshots, export logs.

	links them to AI systems, controls, risks, obligations, reports, reviews, and audit trail events.	
What is the Trust Graph?	The Trust Graph is the relationship model connecting AI systems, vendors, risks, controls, obligations, evidence, incidents, reviewers, and reports.	Trust Graph screenshot/API output.
What is the Smart Scoring Engine?	It is a transparent readiness scoring layer based on evidence completeness, control coverage, risk severity, open tasks, stale evidence, review status, and integration freshness.	Scoring formula note, dashboard screenshot.
What triggers automations?	Automations are hybrid: scheduled checks for stale evidence and regulatory updates, event-driven triggers where integrations support it, and workflow triggers from new systems, risks, reviews, reports, or vendor changes.	Automation rule library, task logs.
Which integrations matter first?	GitHub, Slack, Jira, Google, Microsoft 365, AWS/cloud controls, audit logs, and evidence-upload flows are the first integration direction. Each should be marked live, beta, staged, or planned.	Integration status table, OAuth/log proof.
How does human review work?	AI-generated or assisted outputs are reviewed, approved, rejected, or sent back for changes before final reports, trust-center releases, risk acceptances, or customer-facing artifacts.	Review workflow screenshots, sign-off logs.
Does CompliVibe replace lawyers or auditors?	No. CompliVibe creates structured workflows, evidence, documentation, monitoring, and review trails. Customer/legal owners remain responsible for final decisions.	Terms, disclaimers, review policy.

03

Traction and customer proof

Question investors may ask	Investor-ready answer	Proof / data-room file to support
What traction exists today?	The latest data-room snapshot shows 3 paying customers, 5 beta trials, 2 opportunities in conversion, and 13 waitlist accounts.	Traction PDF, invoices, CRM export.
Who are the paying customers?	The current paid logos are Vessora AI, Fitlit, and GlideRun AI. Each should be supported with invoice/payment proof before investor circulation.	Invoices, payment receipts, customer confirmations.
Is there verified MRR?	Do not overstate MRR until billing is verified. Present customer count and attach invoices, then add a verified MRR bridge once finance proof is ready.	Billing export, bank/payment proof.
What proof should investors see first?	Invoices/payment receipts, signed terms or customer confirmations, pilot agreements, usage screenshots, CRM export, demo access, and product QA report.	Traction folder and CRM export.

What is the next 90-day proof plan?	Verify revenue and data room in 0-30 days, convert beta trials in 31-60 days, and scale MRR/references/repeatable pipeline in 61-90 days.	Traction PDF next-90-days page.
What should be measured weekly?	MRR/ARR, paid pilots, active pilots, AI systems tracked, evidence objects collected, reports generated, expert reviews completed, and time/blockers removed.	Product analytics, CRM, review logs.

04

Market, GTM, and business model

Question investors may ask	Investor-ready answer	Proof / data-room file to support
Why now?	AI regulation, enterprise procurement, customer trust, and AI operational complexity are converging. Buyers increasingly ask vendors to prove AI governance before deployment or procurement approval.	External regulatory source notes, sales notes.
How will CompliVibe acquire customers?	Near-term GTM should be founder-led outbound, startup communities, accelerators/incubators, compliance/CA advisors, EU expansion advisors, and education-led readiness checks.	GTM plan, CRM, partnership list.
What is the pricing model?	Subscription SaaS with tiers for startups, growth companies, pro/enterprise workflows, and add-ons for frameworks, evidence volume, integrations, trust center, and assurance review.	Pricing page, financial model, customer contracts.
What is the wedge offer?	A readiness workflow that helps an AI company create credible governance proof before buyers, investors, or regulated-market partners ask for it.	Sample readiness report, sales deck.
What does expansion look like?	Start with EU AI Act + DPDP readiness, then expand into broader AI governance, ISO/NIST/SOC readiness, U.S. ADMT readiness, evidence automation, trust center, and eventually AI observability.	Roadmap, product architecture.
What channel partnerships matter?	Compliance consultants, CA firms, EU market-entry advisors, incubators, accelerators, founder communities, and specialized legal/compliance advisors.	Partner target list, intro tracker.

05

Competition and moat

Question investors may ask	Investor-ready answer	Proof / data-room file to support
Who are the main competitors?	The competitive set includes Vanta, Sprinto, Scrut, OneTrust, Credo AI, consultants/law firms, internal spreadsheets, and future AI governance offerings from larger GRC vendors.	Competition slide, investor memo.

Why will CompliVibe win against incumbents?	CompliVibe is built around AI systems, evidence, risks, controls, reviews, reports, and trust outputs from day one, with an accessible wedge for early AI-first companies.	Product demo, workflow comparison.
Why not just use consultants?	Consultants are trusted but expensive and manual. CompliVibe aims to preserve expert review while making evidence, workflows, versioning, and reporting repeatable.	Customer interviews, pricing comparison.
What is the moat?	The moat is cross-framework mapping, customer-specific evidence history, workflow data, review trails, trust outputs, and distribution inside AI-first startup/compliance channels.	Architecture doc, evidence history examples.
What creates switching costs?	Once a company stores AI systems, evidence, reviews, risk decisions, reports, and buyer-trust history inside CompliVibe, replacing the platform means rebuilding governance memory.	Customer workspace export, audit trail.

06

Financing, cap table, and runway

Question investors may ask	Investor-ready answer	Proof / data-room file to support
What is the current raise?	CompliVibe is preparing a \$150K angel/pre-seed round at a \$1.5M post-money valuation for 10% investor ownership in the current pro-forma cap table.	Cap table workbook, use-of-funds PDF.
How will funds be used?	45% Product & Engineering, 25% Compliance & Research, 20% Go-To-Market & Sales, and 10% Cloud & Infrastructure.	Use-of-Fund PDF.
What hiring does the round fund?	Compliance Associate #1 and Backend Engineer in Month 1; Compliance Associate #2 and Frontend Engineer in Month 2; two interns in Month 3.	Use-of-Fund PDF, financial model.
What is the modeled cash position after the raise?	The financial model/use-of-funds sheet shows \$19,250 current cash plus \$150,000 raise, giving \$169,250 starting cash post-raise.	Financial model, use-of-funds PDF, bank proof.
What is the runway?	The financial model currently shows a 24-month positive cash balance under its assumptions. Present this as modeled runway, not a guaranteed outcome.	Financial model assumptions tab.
What does the cap table look like post-round?	The pro-forma cap table models Adarsh Kumar Sharma at 45%, Saransh Jha at 36%, ESOP at 9%, and investor(s) at 10%.	Cap table workbook.
Is there an advisor equity obligation?	The Shubham Raj advisor agreement states no current equity, options, or cash compensation. Any future advisor equity or compensation requires a separate written agreement.	Advisor agreement.

07

Risk, legal, and security

Question investors may ask	Investor-ready answer	Proof / data-room file to support
What is the biggest risk?	The biggest risk is converting early traction into verified revenue, usage, references, and repeatable acquisition. The mitigation is a strict 90-day proof plan.	Traction folder, CRM, weekly metrics.
What should not be claimed?	Do not claim PMF, guaranteed compliance, lawyer replacement, full automation, or verified MRR unless supporting proof exists.	Language policy, investor memo.
What security proof should be prepared?	Access controls, audit logs, retention policy, backups, subprocessors, data flow, endpoint health, and product QA report should be documented before serious enterprise diligence.	Security/data-handling note, QA report.
How is legal liability handled?	Position CompliVibe as infrastructure and workflow support. Outputs require review, customer approval, and where appropriate legal/compliance review.	Customer terms, disclaimers, review workflow.
What documents are still missing?	Billing export, customer-wise MRR/contract-value table, invoices/payment proof, pilot confirmations, CRM export, product analytics, and security/data-handling note.	Data-room checklist.
What would make the company more fundable quickly?	Verified invoices, 3-5 referenceable users, product usage metrics, conversion of beta trials, repeatable demo-to-pilot motion, and clean source-backed data room.	Proof plan, CRM, customer references.

08

Source and disclaimer notes

Primary internal sources used

One-pager, traction PDF, team bios, use-of-funds PDF, cap table workbook, financial model workbook, advisor agreement, and the investment memo already created for the data room.

Data-room disclaimer

This FAQ is a confidential investor-support document, not legal, tax, accounting, or securities advice. All traction, revenue, ownership, runway, product, integration, and roadmap claims should be verified against primary source files before external circulation.
