

CompliVibe

AI Trust Infrastructure for the AI economy

CompliVibe helps companies govern, monitor, and prove trust in AI systems. We connect AI governance, observability, compliance, evidence, and risk into one operating layer so teams can deploy AI safely, sell faster, and stay enterprise-ready.

THE PROBLEM

AI is spreading across products, workflows, data pipelines, and autonomous agents faster than companies can control it. Most teams still lack one system to know what AI is in use, how it behaves, where risk appears, whether policies are followed, and how to prove trust to customers, auditors, enterprise buyers, and regulators.

TARGET CUSTOMERS

AI-first SaaS companies, ML platforms, fintech/healthtech AI teams, and enterprise AI vendors selling into regulated or trust-sensitive markets.

WHY COMPLIVIBE WINS

Most vendors solve only one slice; governance, compliance, or monitoring. CompliVibe brings trust, governance, observability, evidence, and control into one AI-native system. Compliance is the wedge; AI trust infrastructure is the destination.

BUSINESS MODEL

Subscription SaaS for startups, growth companies, and enterprises. Revenue expands through more AI systems, integrations, framework packs, observability modules, and assurance workflows.

THE PLATFORM

CompliVibe is the operating layer for AI trust.

AI Governance: inventory AI systems, models, vendors, owners, use cases, and policy obligations.

AI Observability: monitor AI behavior, risk signals, incidents, drift, and operational trust.

Compliance & Evidence: map frameworks, collect evidence, maintain audit trails, and generate readiness artifacts.

Trust & Readiness: support enterprise procurement, trust reports, questionnaires, and regulator readiness.

OUR VISION

To become the trust, governance, and observability layer for every company operating AI at scale.

BIGGER VISION

Like Datadog or Coralogix for reliability, but for AI trust — covering governance, observability, compliance, evidence, risk, and enterprise readiness.

WHY NOW

AI regulation, enterprise procurement, and production AI risk are converging — making AI trust infrastructure a core need, not a future add-on.
