

CompliVibe

AI Governance and Compliance Infrastructure

Confidential Investment Document for Data Room

Prepared for angel / pre-seed investor diligence | \$150K round | \$1.5M post-money | June 2026

3 Paying customers Vessor AI, Fitlit, GlideRun AI	5 Beta trials Pilot pool for conversion and usage learning	13 Waitlist Founder-reported qualified demand signal	\$150K Current raise target Milestone capital for product + GTM
---	--	--	---

Data-room note

This document is designed to sit beside proof files: invoices, pilot agreements, usage screenshots, CRM export, product QA report, security notes, and live demo access. Numbers should be updated from source systems before external circulation.

Primary contact: Adarsh Sharma, Founder & CEO | website: complivibe.in | product: app.complivibe.in

OVERVIEW

Document map

Use this as the investor memo inside the data room. The deck creates interest; this document answers diligence questions.

#	Section	Investor question answered
1	Executive summary	Company thesis, investment highlights, current proof.
2	Why now	Regulatory, procurement, and AI accountability timing.
3	Problem and customer pain	Why buyers need governance proof before enterprise sales.
4	Product and platform	What CompliVibe does, what is live, and what is next.
5	Traction and customer proof	Current customers, funnel, diligence gaps, usage targets.
6	Market and GTM	Layered market entry, ICP, sales motion, pricing.
7	Competition and moat	Incumbents, strategic wedge, defensibility.
8	Roadmap and use of funds	\$150K allocation, milestones, proof plan.
9	Team and operating model	Founder, COO/CFO, human review layer.
10	Risks, data-room checklist, appendix	Honest investor diligence and source notes.

Investor-ready framing

CompliVibe is not a document generator and should not be sold as a legal replacement. It is AI-native governance and compliance infrastructure: inventory, evidence, obligations, monitoring, reports, workflows, human review, and audit trails in one system.

Executive summary

CompliVibe is building the system of record for AI governance, evidence, compliance readiness, and buyer trust.

CompliVibe is AI-native governance and compliance infrastructure for companies building, deploying, and selling AI into regulated markets. The first wedge is AI-first startups and SaaS teams that need EU AI Act and India DPDP readiness before regulated buyers, enterprise procurement teams, or investors ask for proof.

The long-term ambition is to become the trust infrastructure layer for the AI economy: a single platform where AI systems, controls, risks, vendors, evidence, reports, monitoring events, human approvals, and regulatory obligations live together. The near-term wedge is intentionally narrower: help AI-first companies produce credible governance proof faster and more affordably than manual consulting, spreadsheets, or enterprise GRC stacks.

Live Product status Public app and compliance modules available	EU + DPDP Wedge frameworks AI Act and India DPDP readiness focus	828 Mappings Founder-reported EU AI Act x DPDP mapping graph	23+ Integrations direction GitHub, Slack, Jira, Google, M365, AWS and more
--	---	---	---

Investment highlights

- Early commercial proof: 3 paying customers, 5 beta trials, 2 opportunities in conversion, and 13 waitlist accounts based on latest founder-reported snapshot.
- Clear urgency wedge: AI companies increasingly need governance evidence before regulated-market entry, enterprise procurement, and customer trust reviews.
- Platform ambition with a narrow entry: start with AI Act + DPDP readiness; expand into AI governance, SOC 2/ISO readiness, Colorado / U.S. ADMT readiness, ISO 42001, NIST AI RMF, evidence automation, and trust workflows.
- AI-native architecture: the product is built around AI systems, evidence, risks, obligations, review logs, reports, and governance workflows rather than retrofitting AI into a generic GRC tool.
- Human review layer: CompliVibe makes compliance experts and legal teams faster; it does not claim to replace them or guarantee compliance outcomes.

Current financing ask

CompliVibe is currently preparing a \$150K angel / pre-seed round at a \$1.5M post-money valuation, representing 10% post-round investor ownership in the current pro-forma cap table. The round is milestone capital: convert pilots into paid customers, harden the product, strengthen evidence automation, improve customer success, and package repeatable governance readiness workflows for early ICP segments.

Financing item	Current data-room input	Source / diligence note
----------------	-------------------------	-------------------------

Round size	\$150,000	Latest one-pager, use-of-funds sheet, cap table, and financial model align on this raise size.
Valuation	\$1.5M post-money	Pro-forma cap table models this as a post-money round.
Investor ownership	10% post-round	Seed investor line modeled at 1,111,111.11 notional shares on an 11,111,111.11 fully diluted post-round base.
Starting cash after raise	\$169,250	Financial model / use-of-funds sheet: \$19,250 current cash plus \$150,000 raise.

02

Why now

AI accountability is moving from optional ethics talk to operational, commercial, and regulatory infrastructure.

The timing for CompliVibe is driven by three forces coming together: regulation, procurement, and operational complexity. AI-first companies are shipping faster than their governance systems can keep up. Buyers increasingly ask whether AI systems are classified, documented, monitored, reviewed, auditable, and supported by evidence.

Timing force	What is changing	Why it matters for CompliVibe
Regulation	EU AI Act implementation timeline, India DPDP, Colorado / U.S. ADMT readiness, ISO 42001 and NIST AI RMF adoption pressure.	Creates a concrete reason for AI companies to build governance readiness before sales or deployment risk becomes urgent.
Procurement	Enterprise buyers and regulated customers ask AI vendors for trust, security, privacy, and governance evidence.	Turns compliance from a cost center into a sales enablement requirement.
Operations	AI systems, models, vendors, datasets, prompts, policies, incidents, and reviews are scattered across tools.	Creates demand for a system of record rather than one-off documents or spreadsheets.

Regulatory context

- EU AI Act: entered into force on 1 August 2024 and becomes broadly applicable on 2 August 2026, with staged exceptions. This creates a near-term readiness window for companies building or deploying AI in the EU.
- India DPDP: India’s data protection framework and 2025 rules create operational privacy obligations that intersect with AI governance, evidence, vendor oversight, and data handling workflows.

Colorado / U.S. readiness: Colorado revised its AI framework through SB26-189, replacing the earlier SB24-205 approach with an automated decision-making technology framework taking effect in 2027. This still supports the broader U.S. trend toward AI transparency, notice, rights, and consequential-decision oversight.

Standards pressure: ISO 42001 and NIST AI RMF are not only compliance labels; they shape how customers ask for AI governance operating evidence.

Commercial timing

The strongest why-now argument is not only penalties. It is procurement. When buyers ask for AI governance proof, the workflow becomes connected to revenue, not only legal risk.

03

Problem and customer pain

AI companies need governance proof, but the current process is manual, expensive, scattered, and slow.

AI-first startups and SaaS teams are increasingly expected to show documentation, risk assessment, monitoring, and review trails. Most early teams do not have a dedicated compliance team, cannot afford heavyweight enterprise tools, and do not want months of manual consulting just to prepare a first governance layer.

Pain	How it shows up	Business impact
No AI system of record	Models, datasets, vendors, owners, use cases, and risk decisions are tracked in docs or not tracked at all.	Governance becomes inconsistent and impossible to diligence quickly.
Manual evidence work	Screenshots, policies, tickets, logs, and approvals are collected ad hoc during reviews.	Slow sales cycles, high founder time cost, weak audit trail.
Regulatory uncertainty	Teams do not know which obligations apply or what evidence to create first.	Delays readiness and increases dependency on expensive advisory work.
Procurement blockers	Enterprise buyers ask for AI governance artifacts, model cards, vendor proof, controls, or risk documentation.	Deals slow down before product value is fully evaluated.
Review and liability concerns	AI-generated outputs need expert review, versioning, and customer sign-off.	Pure automation is not trusted; manual legal work is slow and costly.

The customer language

The customer does not wake up wanting a GRC platform. The customer feels: “We need to prove our AI system is safe, documented, monitored, and ready before a buyer, regulator, investor, or partner asks hard questions.”

Current alternatives

Alternative	Why customers use it	Why it breaks
Consultants / law firms	High trust, domain expertise, sign-off support.	Expensive, slow, hard to repeat, often not connected to product evidence.
Spreadsheets and docs	Cheap and flexible.	Not auditable, not live, not versioned, and does not scale across AI systems.
Legacy GRC / privacy tools	Known enterprise category.	Often built around privacy, security, SOC 2, ISO, and enterprise GRC - not AI-native evidence and AI system workflows.
Internal tools	Can be tailored.	Takes engineering focus away from core product and still needs regulatory logic.

04

Product and platform

CompliVibe turns AI governance into an operating workflow: inventory, evidence, obligations, monitoring, reports, review, and trust outputs.

CompliVibe is designed as a structured governance system, not a one-time PDF generator. The platform starts from the AI system profile, connects obligations and controls, collects or maps evidence, produces reports and trust artifacts, and routes final outputs through review and sign-off workflows.

Layer	What it does	Investor proof to show
AI System Inventory	Tracks AI systems, owners, purpose, use case, model, vendor, data source, risk tier, and deployment status.	Workspace screenshots, sample system profiles, user activity.
Evidence Vault	Stores evidence objects, links them to obligations, systems, controls, risks, reports, and audit trail.	Evidence objects, version history, sample mappings.
Regulatory Packs	EU AI Act + India DPDP live; expansion into ISO 42001, NIST AI RMF, SOC 2 / ISO 27001, Colorado / U.S. ADMT readiness.	Framework map, pack status, customer use cases.
Trust Graph	Models relationships between AI systems, obligations, controls, risks, evidence, vendors, incidents, and reviews.	Graph screenshots, API output, sample dependency trail.
Smart Scoring	Calculates governance readiness, audit readiness, control coverage, evidence completeness, risk severity, and review status.	Formula notes, sample scores, before/after readiness views.

Automation Rules	Triggers evidence tasks, review actions, update alerts, risk escalations, and report refreshes from integrations and scheduled checks.	Rule library, logs, task history, notification examples.
Reports & Trust Center	Produces buyer-ready governance packets, readiness reports, questionnaires, and private/public trust center outputs.	Sample redacted reports, trust page screenshots.
Human Review Portal	Allows reviewers to approve, reject, request changes, sign off, and version final outputs.	Review log, sign-off trail, reviewer workflow.

Live vs roadmap status

Capability	Current status	Notes for diligence
EU AI Act readiness	Live / active wedge	Show module screenshots, generated output, and obligation mapping.
India DPDP readiness	Live / active wedge	Show DPDP workflows and cross-mapping to AI/evidence work.
Evidence Vault + audit trail	Live / hardening	Show version history, linked evidence, and report export flow.
AI Governance workflows	Built / expanding	Show inventory, risk register, Trust Graph, and human review direction.
Integrations	Supported / staged by connector	Show which are OAuth-connected today vs planned; do not overclaim full automation for every control.
SOC 2 / ISO 27001 / ISO 42001 / NIST AI RMF	Expansion packs	Position as next readiness packs, not fully mature enterprise replacement on day one.
Colorado / U.S. ADMT readiness	Expansion pack	Update pack language as Colorado and U.S. state AI obligations evolve.

Safe claim discipline

Say “evidence automation direction” unless a specific control is already pulling evidence from a connected system. Investors will distinguish static checklist coverage from connected evidence collection.

Technology and architecture

The defensible layer is the governance graph plus workflow data, not generic AI generation.

CompliVibe’s technical architecture should be communicated around structured workflow data. The system becomes more valuable as customers classify AI systems, attach evidence, map controls, generate reports, resolve tasks, and build review history over time.

Architecture component	Function	Why it matters
Regulatory obligation graph	Maps frameworks, clauses, controls, evidence types, tasks, and report outputs.	Creates repeatable compliance logic and cross-framework reuse.
Evidence object model	Normalizes uploads, integration pulls, screenshots, policy files, tickets, logs, approvals, and reviewer notes.	Enables audit-ready traceability rather than static checklists.
AI system model	Links each AI system to purpose, owner, data, model, vendor, risk, controls, and monitoring signals.	Makes governance system-specific instead of generic policy management.
Workflow engine	Routes tasks, reviews, approvals, re-checks, deadlines, and escalation logic.	Creates operational habit and retention.
Reporting/export layer	Creates governance packs, questionnaires, Annex-style documentation, and trust-center outputs.	Connects platform activity to buyer-ready artifacts.
Security / audit layer	Version history, role access, evidence retention, change logs, reviewer sign-off, and export history.	Critical for investor and enterprise diligence.

Trust Graph model

The Trust Graph should be described as the data model connecting AI systems to obligations, evidence, risks, vendors, controls, reports, incidents, owners, reviewers, and audit events. This is the core “system of record” argument: when a buyer asks why a claim is true, CompliVibe can trace from claim to evidence to reviewer to timestamp.

Smart scoring model

For investors, avoid making the scoring engine sound magical. Explain it as a transparent readiness scoring layer based on evidence completeness, control coverage, risk severity, open tasks, stale evidence, reviewer status, incident history, and integration freshness. The system should show component scores, not only one master score.

Automation engine

The automation layer should be framed as hybrid: scheduled checks for stale evidence and regulatory updates; event-driven triggers where integrations support events; and workflow-based triggers from user actions such as new AI systems, new vendors, report exports, risk changes, or review decisions.

06

Traction and customer proof

Current traction is early but real: paid customers, beta demand, waitlist pull, and a live product wedge.

Investor framing: this is not product-market fit yet. It is early commercial validation. The data room should prove the claims with invoices, customer confirmations, pilot agreements, usage screenshots, CRM exports, and customer reference permissions.

Customer and pipeline detail

Account / cohort	Stage	Signal	Data-room proof to attach
Vessora AI	Paying customer	Commercial validation from AI-first customer profile.	Invoice, subscription record, signed terms, onboarding proof, reference permission.
Fitlit	Paying customer	Early usage and product-fit signal.	Invoice, usage snapshot, onboarding evidence,

			testimonial if permitted.
GlideRun AI	Paying customer	Additional paid logo; validates repeatability.	Invoice, agreement, support history, active workspace proof.
2 qualified opportunities	In conversion	Near-term paid pipeline.	CRM export, email threads, next-step date, expected contract value.
5 beta trials	Pilot / beta	Learning loop and conversion pool.	Pilot terms, usage analytics, feedback logs, conversion plan.
13 waitlist accounts	Waitlist	Inbound / qualified demand signal.	Waitlist export with company domain, source, qualification, owner, follow-up date.

07

Market opportunity

The venture case is not that CompliVibe owns all GRC today. It is that AI governance becomes the next compliance infrastructure category.

The market should be explained in layers. The first wedge is narrow and believable. The expansion path is large: AI governance, RegTech, privacy, security compliance, procurement trust, model/vendor oversight, and evidence automation.

Layered market entry

Narrow wedge today. Broad AI trust infrastructure category over time.

TAM

Global AI governance, GRC, RegTech and compliance infrastructure

SAM

India-linked SaaS, AI vendors, fintech / healthtech / HR-tech facing AI governance

SOM

AI-first startups preparing for EU, India, and enterprise procurement readiness

Wedge

EU AI Act + India DPDP readiness with evidence, documentation, and review

Investor framing: the first proof is not owning the whole market - it is converting a painful wedge into repeatable SaaS revenue

Market sizing signal

Market signal	External estimate	Investor interpretation
AI governance software	Grand View Research estimates USD 308.3M in 2025 and USD 3.59B by 2033 at 36.0% CAGR.	AI governance is emerging quickly from a small base; early category formation can reward focused platforms.
RegTech software	Grand View Research estimates USD 24.34B in 2025 and USD 112.10B by 2033 at 21.1% CAGR.	CompliVibe sits near a much larger compliance technology category, but starts with AI-native workflows.
Standards / frameworks	EU AI Act, DPDP, ISO 42001, NIST AI RMF, and U.S. state AI laws create growing operating requirements.	Customers need processes and evidence, not only policy documents.

Initial ICP

AI-first SaaS startups preparing for enterprise or regulated-market sales.

ML platforms and AI vendors needing governance documentation before buyer reviews.

Fintech, healthtech, HR-tech, edtech, and AI teams where decisions, data, risk, and trust requirements are higher.

India-linked SaaS exporters needing EU readiness and India data governance alignment.

Go-to-market and business model

Sell readiness before the buyer asks; sell urgency when procurement asks.

The early sales motion should remain founder-led and proof-led. CompliVibe should not sell “compliance software” abstractly. It should sell a concrete outcome: governance proof, evidence readiness, and buyer-ready trust outputs before enterprise or regulated-market sales.

Channel	Why it works	Near-term objective
Founder-led outbound	Direct access to founders, CTOs, product leaders, and AI teams experiencing procurement blockers.	50 leads, 15 calls, 10 pilots, 3 paid conversions cycle.
Startup communities	Concentrated AI-first startups and SaaS founders.	Readiness check campaigns and demo pipeline.
Accelerators / incubators	High-trust distribution with early-stage AI companies.	Mentor-backed introductions and pilot credibility.
Compliance / CA firms	Trusted advisors already influence buyer and governance decisions.	Referral partnerships and expert review capacity.
EU expansion advisors	They see readiness blockers before founders do.	High-intent leads preparing for regulated buyer conversations.
Education-led content	Regulation and procurement create confusion; checkers and webinars generate intent.	Inbound demos and trust authority.

Pricing architecture

Plan	Indicative price	Best-fit customer	What it includes
Starter	INR 9,999 / month	Small AI startup beginning readiness.	Readiness check, core docs, inventory, basic evidence.
Growth	INR 24,999 / month	Startup with more AI systems or active buyer reviews.	Evidence vault, monitoring, workflows, review support.
Pro	INR 74,999 / month	Team needing procurement support and trust artifacts.	Trust center, buyer Q&A, expert review, deeper governance.
Enterprise	INR 1.5L - INR 5L / month	Regulated company or larger AI vendor.	Custom workflows, integrations, security, review, governance support.

Pricing discipline

Do not price CompliVibe like a small PDF tool. Early discounted pricing is acceptable for validation, but the platform should expand with AI systems, evidence volume, frameworks, review depth, integrations, trust center, and enterprise workflows.

09

Competition and moat

Incumbents have distribution. CompliVibe's advantage is focus, AI-native workflows, evidence history, and wedge speed.

The competitive narrative should be mature: large incumbents can add AI features. CompliVibe does not win by claiming they cannot. It wins by entering an underserved wedge early, building AI-system-specific workflows, collecting evidence history, and becoming the operating record for governance readiness.

Category	Representative players	Primary gap	CompliVibe edge
Security compliance automation	Vanta, Sprinto, Scrut	SOC 2 / ISO-first; AI governance is not the native center.	AI system inventory, AI evidence, AI governance reports, DPDP/EU AI Act wedge.
Privacy / enterprise GRC	OneTrust and large GRC suites	Powerful but heavy, expensive, enterprise-first.	Affordable AI-native workflows for startups and AI vendors.
AI governance specialists	Credo AI and emerging AI governance platforms	Often enterprise-focused; may be less accessible to early-stage India-linked SaaS.	Narrow wedge, India + EU angle, founder-led onboarding, expert review.
Consultants / law firms	Advisory firms and legal teams	High trust but manual, expensive, hard to repeat.	Automation plus human review; evidence and workflow history retained.
Internal spreadsheets	Docs, sheets, Notion, Jira	Cheap but scattered and not audit-ready.	System of record with obligations, evidence, review, and reports.

Moat thesis

Regulatory graph: mapping obligations, evidence types, workflows, controls, risks, reports, and review requirements across frameworks.

Evidence history: customer-specific proof, timestamps, review logs, exports, decisions, and control state create switching costs.

Workflow lock-in: inventory to evidence to risk to review to trust outputs becomes a repeated operating habit.

Distribution moat: partnerships with CA firms, compliance consultants, EU advisors, startup communities, accelerators, and vertical experts.

Trust moat: human review, disclaimers, versioning, audit trails, and customer final responsibility reduce legal and credibility risk.

Investor answer

They can copy features. The harder part is owning workflow-specific data, trust habits, review history, and distribution inside the AI-first governance wedge before incumbents prioritize it deeply.

10

Roadmap and milestones

The next 90 days should convert narrative into proof: revenue, usage, references, and repeatable pipeline.

Milestone roadmap

The round is milestone capital: customer proof, product hardening, and governance depth.

Milestone plan

Timeframe	Priority	Target proof
0-30 days	Verify traction and clean data room.	Invoices, payment proof, signed terms, usage screenshots, CRM export, customer reference permission.

31-60 days	Convert beta trials and improve onboarding.	Pilot conversion notes, paid conversion targets, onboarding checklist, customer success cadence.
61-90 days	Scale proof and deepen governance.	More paid logos, usage dashboard, reports generated, evidence collected, reviews completed, Trust Graph demo.
3-6 months	Package repeatable readiness workflows.	EU AI Act + DPDP workflow playbook, SOC/ISO/AI governance expansion, partner/referral motion.
6-12 months	Build toward AI trust infrastructure.	Expanded regulatory packs, stronger integration automation, enterprise security readiness, partner-led pipeline.

Key operating metrics

Metric	Why it matters	Data-room source
MRR / ARR	Shows revenue momentum.	Billing export, invoices, bank/payment confirmation.
Paid customers / paid pilots	Shows willingness to pay and repeatability.	Contracts, payment records, workspace proof.
Active pilot conversion	Shows funnel quality.	CRM export, pilot agreements, meeting notes.
AI systems monitored	Shows platform usage beyond docs.	Product analytics, system inventory count.
Evidence objects collected	Shows evidence automation and audit depth.	Evidence Vault analytics and integration logs.
Reports generated / exported	Shows customer-facing value.	Report history and export logs.
Expert reviews completed	Shows trust layer operation.	Review logs, sign-off records, reviewer notes.
Time saved / blockers removed	Shows ROI narrative.	Customer interviews, before/after process notes.

Use of funds and financing model

\$150K round focused on v4.0 shipping, compliance depth, GTM conversion, and cloud/security readiness.

The raise should be positioned as milestone capital, not exploration capital. The uploaded use-of-funds and financial model frame the raise around shipping v4.0 before the 2026 AI governance enforcement wave, converting beta and waitlist demand, and extending runway against modeled burn.

Use of funds allocation

Use	Allocation	Milestone unlocked
Product & Engineering	\$67,500 / 45%	Backend engineer, frontend engineer, and interns building the v4.0 platform rebuild.
Compliance & Research	\$37,500 / 25%	2 compliance associates mapping EU AI Act + India DPDP controls and building evidence/audit workflows.
Go-To-Market & Sales	\$30,000 / 20%	Convert beta trials and waitlist accounts into paying customers ahead of the 2026 AI governance market inflection.
Cloud & Infrastructure	\$15,000 / 10%	Hosting, security tooling, and Oracle Cloud production environment.

Hiring plan funded by this round

Role	Monthly salary	Start month
Compliance Associate #1	INR 50,000	Month 1
Backend Engineer	INR 60,000	Month 1
Compliance Associate #2	INR 50,000	Month 2
Frontend Engineer	INR 55,000	Month 2
Intern #1 & #2	INR 15,000 each	Month 3

Financial model snapshot

Metric	Model input / output	Investor diligence note
Current cash on hand	\$19,250	Before this round; verify with bank statement or ledger.
New investment	\$150,000	Round size used in cap table and financial model.
Total starting cash post-raise	\$169,250	Use-of-funds and financial model output.
Current monthly burn	\$2,750	Pre-hiring average monthly burn input.
Modeled runway	24 months positive cash balance	Financial model output under current assumptions; depends on hiring/ramp assumptions.
Ending cash, Month 24	\$40,924.70	Model output; do not present as guarantee.

Cap table summary

Stage	Adarsh Kumar Sharma	Saransh Jha	ESOP	Investor(s)	Total
Pre-round, before ESOP	60%	40%	-	-	100%
Post-ESOP, pre-round	50%	40%	10%	-	100%
Post-round pro forma	45%	36%	9%	10%	100%

Advisor status

Shubham Raj is documented as an informal, non-exclusive advisor with no current equity, options, or cash compensation. Any future advisor equity or compensation requires a separate written agreement. The advisor agreement also includes IP assignment and three-year confidentiality obligations.

What should be true after the round

More paid customers and verified MRR, supported by invoices and billing records.

Clear beta-to-paid conversion data with reasons for conversion or churn.

Operational product proof: evidence collected, reports generated, reviews completed, systems monitored.

A repeatable EU AI Act + DPDP readiness workflow that can be sold without custom founder effort every time.

A stronger data room with security, product, customer, and financial proof ready for the next round.

12

Team and operating model

Technical AI product depth plus enterprise operations and compliance execution.

The current founding team should be presented as lean and execution-focused. The story is not that the team already has a large enterprise compliance organization. The story is that the team has founder-market urgency, AI/ML product capability, operations discipline, and a human-review workflow that can grow with customer demand.

Person	Role	Relevant strength	Operating ownership
Adarsh Sharma	Founder & CEO	Final-year B.Tech student in Computer Science & Mathematics at IIT Patna, graduating August 2026; Google Developer; ex IBM; ex Databricks intern; production ML builder across voice AI, RAG, and agentic workflows.	Vision, fundraising, product narrative, GTM, investor calls, category positioning, product direction, engineering leadership.
Saransh Jha	Co-Founder, COO & CFO	Allahabad University; Genpact and Concentrix; 10+ years in senior operations and compliance execution.	Review workflow, customer success, SOPs, pilot execution, fundraising operations, finance discipline, day-to-day company building.
Suraj Kumar Jha	Data / ML Intern	IIT Patna B.S. Computer Science student (2024-2028) with Python, SQL, statistics, relational databases, and machine-learning foundation.	Supports data and ML workstreams, analytics, and research pipeline.
Planned hires	Compliance + Engineering + Interns	2 compliance associates, backend engineer, frontend	Ship v4.0, strengthen compliance mapping,

		engineer, and interns funded by this round.	evidence workflows, production readiness, and customer support.
--	--	---	---

Human review / assurance review layer

CompliVibe should always frame AI output as structured work that is reviewed, versioned, and signed off where appropriate. The platform makes lawyers, compliance teams, and expert reviewers faster; it does not remove customer responsibility or guarantee legal compliance.

Step	Owner	Output
Customer intake	Customer success / founder-led onboarding	Company profile, AI system profile, use case and risk context.
Automated generation	Platform	Draft docs, evidence map, control suggestions, monitoring summary.
Risk flags	Platform + reviewer	Unclear areas, missing evidence, higher-risk issues.
Expert review	Compliance expert / reviewer	Reviewed output, comments, changes, approval or request for changes.
Customer final sign-off	Customer / advisor / legal owner	Final responsibility and use approval.
Versioning	Platform	Audit trail, review history, export history, evidence timestamp.

13

Risks and mitigation

Investors will trust the company more if the risks are named clearly and controlled with proof.

Risk	Why it matters	Mitigation / data-room proof
Traction still early	3 paid customers is promising but not yet PMF.	Show invoices, usage, references, CRM export, conversion movement, and weekly metrics.
Revenue not fully verified in memo	MRR/ARR must be grounded in billing records.	Attach billing export and customer-wise contract values before external circulation.
Automation overclaim risk	Investors will challenge static checklist vs live evidence collection.	Label each integration/control accurately as live, beta, planned, or manual evidence.

Regulatory complexity	AI governance and data protection change quickly.	Use source-mapped frameworks, update logs, expert review, disclaimers, and versioning.
Incumbents can enter	Large GRC/security platforms have distribution.	Win narrow wedge with speed, AI-native workflow, affordable pricing, and evidence history.
Legal liability perception	Customers may incorrectly believe AI output equals legal compliance.	Clear disclaimers: expert review helps, customer/legal final responsibility remains.
Security expectations	Enterprise trust requires security maturity.	Document access controls, audit logs, retention, backups, endpoint health, and product QA.

Language to avoid

Do not say: “No lawyers required.” Say: “We make lawyers and compliance teams faster.”

Do not say: “We guarantee compliance.” Say: “We help customers prepare evidence, workflows, and reviewed outputs.”

Do not say: “All controls are automated.” Say exactly which controls are static, assisted, or connected to live evidence.

Do not say: “We have PMF.” Say: “We have early commercial validation and are moving toward repeatability.”

14

Data-room checklist

The investment memo becomes much stronger when every claim has a supporting file.

Folder	Files to include	Why investors need it
01_Company	Investment memo, pitch deck, one-pager, founder intro, cap table if ready.	Basic company narrative and diligence orientation.
02_Traction	Invoices, payment proof, customer confirmations, billing export, MRR bridge.	Verifies willingness to pay and revenue claims.
03_Customers	Customer list, pilot agreements, testimonials, reference permissions, onboarding notes.	Proves customer reality and usage context.
04_Product	Demo video, screenshots, QA report, release notes, app credentials, sample outputs.	Shows product is real and not slideware.
05_Technical	Architecture diagram, API/endpoint health, integration list, security controls, data retention.	Supports trust and enterprise readiness.
06_GTM	CRM export, lead sources, pipeline stages, conversion notes, partner list, GTM	Shows repeatability beyond founder conviction.

	experiments.	
07_Frameworks	EU AI Act map, DPDP map, cross-mapping notes, source references, update logs.	Supports the regulatory depth claim.
08_Finance	Use of funds, forecast, pricing, burn assumptions, hiring plan, cap table, financial model.	Shows capital discipline, ownership model, runway, and milestone logic.
09_Legal	Advisor agreement, company docs, customer terms, disclaimers, privacy/security policies if available.	Reduces avoidable diligence friction and clarifies current advisor equity/compensation status.

Uploaded data-room inputs already incorporated

One-pager: AI Trust Infrastructure positioning, traction snapshot, and \$150K raise line.

Traction PDF: 3 paying customers, 5 beta trials, 13 waitlist, 23+ integrations, 828 mappings, and next-proof plan.

Team bios: Adarsh Sharma, Saransh Jha, Suraj Kumar Jha, team strengths, and hiring direction.

Use-of-Fund PDF: \$150K allocation, hiring plan, and \$169,250 post-raise cash position.

Cap table workbook: \$1.5M post-money, 10% investor ownership, ESOP carve-out, and post-round ownership.

Financial model workbook: current cash, burn, hiring, runway, and 24-month cash-flow assumptions.

Advisor agreement: Shubham Raj advisory status with no current equity/cash compensation.

Documents still needed before sharing externally

Billing export and customer-wise MRR/contract-value table.

Invoices or payment receipts for Vessor AI, Fitlit, and GlideRun AI.

Pilot agreements or email confirmations for 5 beta trials.

CRM export for 2 in-conversion opportunities and 13 waitlist accounts.

Product usage analytics: weekly active accounts, reports generated, evidence objects, reviews completed.

Security and data-handling note: access control, retention, backups, audit logs, subprocessors, and data flow.

APPENDIX

Source notes and disclaimers

Use external sources for market and regulatory timing, and internal source files for traction.

Internal source files used

Source file	Key information incorporated	Investor caution
One-pager.pdf	AI Trust Infrastructure positioning, traction snapshot, target customers,	Use as public-facing summary but support every metric with proof files.

	product vision, \$150K raise line.	
CompliVibe_Traction.pdf	Traction scorecard, funnel, product proof, data-room readiness, next 90 days.	Earlier visual deck may show \$100K ask on one page; latest financing stack uses \$150K.
CompliVibe_Team_Bios.pdf	Founder/team biographies, why-this-team narrative, hiring direction.	Verify title/legal name consistency before investor sharing.
Use-of-Fund.pdf	45/25/20/10 capital allocation, hiring plan, \$169,250 post-raise cash.	Correct small typos in the source PDF before sharing externally.
CompliVibe_Cap_Table(1).xlsx	\$1.5M post-money, \$150K investment, 10% investor ownership, ESOP carve-out.	Notional share counts are modeling figures, not an issued-share register.
CompliVibe_Financial_Model.xlsx	Current burn, current cash, post-raise cash, runway, hiring and customer-ramp assumptions.	Model outputs are assumptions, not projections guaranteed by the company.
Advisor_Agreement_Shubham_Raj.pdf	Advisor role, no equity/no compensation, IP assignment, confidentiality, independent-advisor status.	Governing-law city placeholder still needs to be filled.

External source notes

Topic	Source used	How it is used
EU AI Act timing	European Commission - AI Act regulatory framework and AI Act entry-into-force announcement.	Supports the statement that the AI Act entered into force on 1 Aug 2024 and is broadly applicable from 2 Aug 2026 with exceptions.
India DPDP	Ministry of Electronics and Information Technology - DPDP Act / DPDP Rules 2025 documents.	Supports India data protection and rules context. Use implementation status carefully and update before external circulation.
Colorado / U.S. AI readiness	Colorado General Assembly SB26-189 and Colorado Attorney General AI rulemaking information.	Supports updated framing that Colorado replaced the earlier SB24-205 approach with an ADMT framework effective 1 Jan 2027.
AI governance market	Grand View Research AI Governance Market Report.	Supports market sizing estimate: USD 308.3M in 2025 and USD 3.59B by 2033 at 36.0% CAGR.
RegTech market	Grand View Research Regulatory Technology Market Report.	Supports market sizing estimate: USD 24.34B in 2025 and USD 112.10B by 2033 at 21.1% CAGR.

Important disclaimers

This is a confidential investor data-room draft, not an offer to sell securities or legal advice.

All CompliVibe traction, customer counts, pricing, roadmap, team details, integrations, product status, and financial assumptions are founder-provided and should be verified with primary documents before investor circulation.

CompliVibe does not replace lawyers, auditors, compliance officers, or customer responsibility. It helps create structured governance workflows, evidence, documentation, monitoring, and review trails.

Market estimates are external third-party estimates and should be used as directional context, not guaranteed market outcomes.

Regulatory timelines and requirements can change; check official sources before using this memo in a live fundraising process.

Clean final investor line

CompliVibe is building AI-native trust infrastructure for the AI economy, starting with AI governance and compliance readiness for AI-first companies that need to prove trust before enterprise and regulated-market sales.
