

Next 90 days

Convert early traction into the proof investors expect: revenue, usage, and references.

Investor takeaway

CompliVibe has enough early signal to justify a focused pre-seed conversation. The next unlock is verified revenue and usage proof.

Current ask

\$100k

Product, GTM experiments, customer success, compliance content, security and audit readiness.

Data-room readiness

Make every traction claim easy to verify.

Must include

-  Customer invoices / payment receipts
-  Signed terms or customer confirmations
-  Pilot usage analytics and feedback notes
-  Pipeline CRM export
-  Demo access or product QA report

Do not overclaim

-  Unpaid pilots are not revenue
-  Do not claim full automation unless evidence pulls from live integrations
-  Do not claim retention before renewals exist
-  Leave MRR / ARR / spend until billing is verified

Clean diligence line

"We have 3 paying customers and an early qualified funnel. Revenue, usage and customer references are the next proof layer."

Product proof behind traction

The product story should feel simple: compliance wedge now, governance system of record next.

01

Compliance wedge

EU AI Act and India DPDP modules are live. Colorado AI Act, SOC 2, ISO 27001, ISO 42001 and NIST AI RMF extend the surface.

02

Evidence layer

Controls, evidence vault, risks, audit trail, review workflow and human sign-off create data room grade governance proof.

03

Mapping engine

828 EU AI Act x DPDP mappings and a 48-hour update pipeline strengthen the infrastructure narrative.

In conversion

2

Paying

3

What to attach

- Invoices and payment proof for 3 paid customers.
- Pilot agreements and usage snapshots for beta trials.
- CRM export for 2 conversion opportunities.
- Waitlist export with source, domain, and next step.

Traction scorecard

Minimal view of the current traction signal and the proof gaps investors will check first.

Regulatory change pipeline

Investor read

Traction is early, but it is real: paid logos + beta demand + waitlist pull around a regulatory wedge.
